

Tudley Didn't Know

John Himmelman

Tudley Didn't Know

Tudley, a pond-living painted turtle, adopts other animals' behaviors, behaviors they use to help them survive, simply because he doesn't know he can't! Tudley flies like a bird, sings like a katydid, hops like a frog, and glows like a firefly. He uses all his special behaviors to help other animals. Will Tudley's new friends help him when he needs help?

It's so much more than a picture book . . . this book is specifically designed to be both a fun-to-read story and a launch pad for discussions and learning. Whether read at home or in a classroom, we encourage adults to do the activities with the young children in their lives. Free online resources and support at www.ArbordalePublishing.com include:

- For Creative Minds as seen in the book (in English & Spanish):
 - Fun Facts about:
 - Painted Turtles
 - True Katydids
 - Fireflies
 - Leopard Frogs
 - Ruby-throated Hummingbirds
 - Crafts:
 - Make sugar water for hummingbirds
 - Make a "hopping" Tudley
 - Teaching Activities:
 - Reading Questions
 - Mathematics
 - Language Arts
 - Geography
 - Science
 - Coloring Pages
- Interactive Quizzes: Reading Comprehension, For Creative Minds, and Math Word Problems
- English and Spanish Audiobooks
- Related Websites
- Aligned to State Standards (searchable database)
- Accelerated Reader and Reading Counts! Quizzes
- Lexile and Fountas & Pinnell Reading Levels

eBooks with Auto-Flip, Auto-Read, and selectable English and Spanish text and audio available for purchase online.

Missouri Show Me Readers Award Program finalist
Utah Beehive Picture Book Award finalist
ForeWord Book of the Year Award finalist
Connecticut Book Award nominee
Book Sense's Autumn 2006 Children's Pics List

John Himmelman has written and/or illustrated over 60 children's books; several of which are award-winning books. Most of John's books stem from his obvious passion for animals and nature. When John isn't busy writing or illustrating his books, he is involved with the Connecticut Butterfly Association, and the Killingworth Land Conservation Trust. He also leads nature walks and gives natural history lectures throughout the country and he works with schools by offering special science observation programs, and teaches courses on children's book writing. John says he has never lost his love of reading and ends each day curled up in bed with a good book!

Tudley was a young turtle who lived in a great big pond. He and all the other turtles liked to spend the warm summer afternoons lying in the sun. It was nice being a turtle in the sun.

One afternoon Tudley stretched out on a rock and watched a hummingbird build its nest. The bird dropped a piece of lichen and it landed next to Tudley.

“I’ll get that,” said Tudley. He picked up the lichen and flew up to the nest.

“Here you go,” he said to the hummingbird.

“What did you just do?” asked the bird.

“I brought you your lichen,” said the turtle.

“But turtles can’t fly,” said the bird.

“They can’t?” said Tudley. “I didn’t know that.”

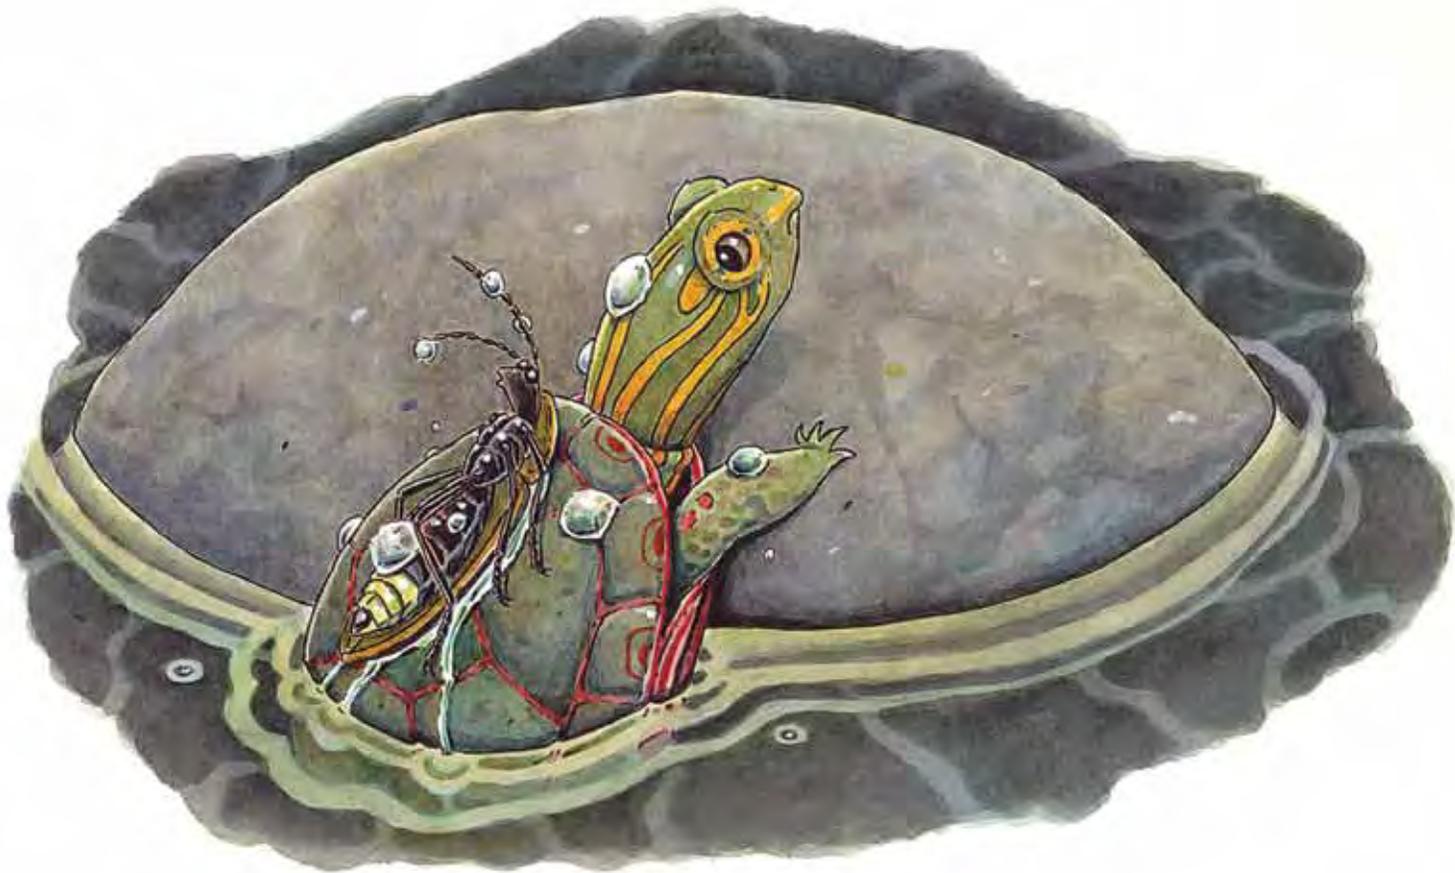

He looked down at the shocked faces of turtles below. “Did you know that turtles can’t fly?” he called down. They all just nodded.

That night as Tudley was resting from a long day of flying from here to there and there to here, he watched the fireflies glowing in the dark. Then he heard a tiny little “plip.” A firefly had fallen into the water beside him. Tudley fished him out.

“Thank you,” said the firefly, “but now I am too wet to fly and everyone will be going home soon.”

“I will call for help,” said Tudley. He lifted his tail in the air and made it glow bright green. “Blink, blink, blink,” went his tail as he signaled to the other fireflies.

One of them landed next to the turtle. “How did you do that?” he asked.

“Do what?” asked Tudley.

“Make your tail glow,” said the firefly. “Turtles can’t make their tails glow.”

“They can’t?” said Tudley. “I didn’t know that.”

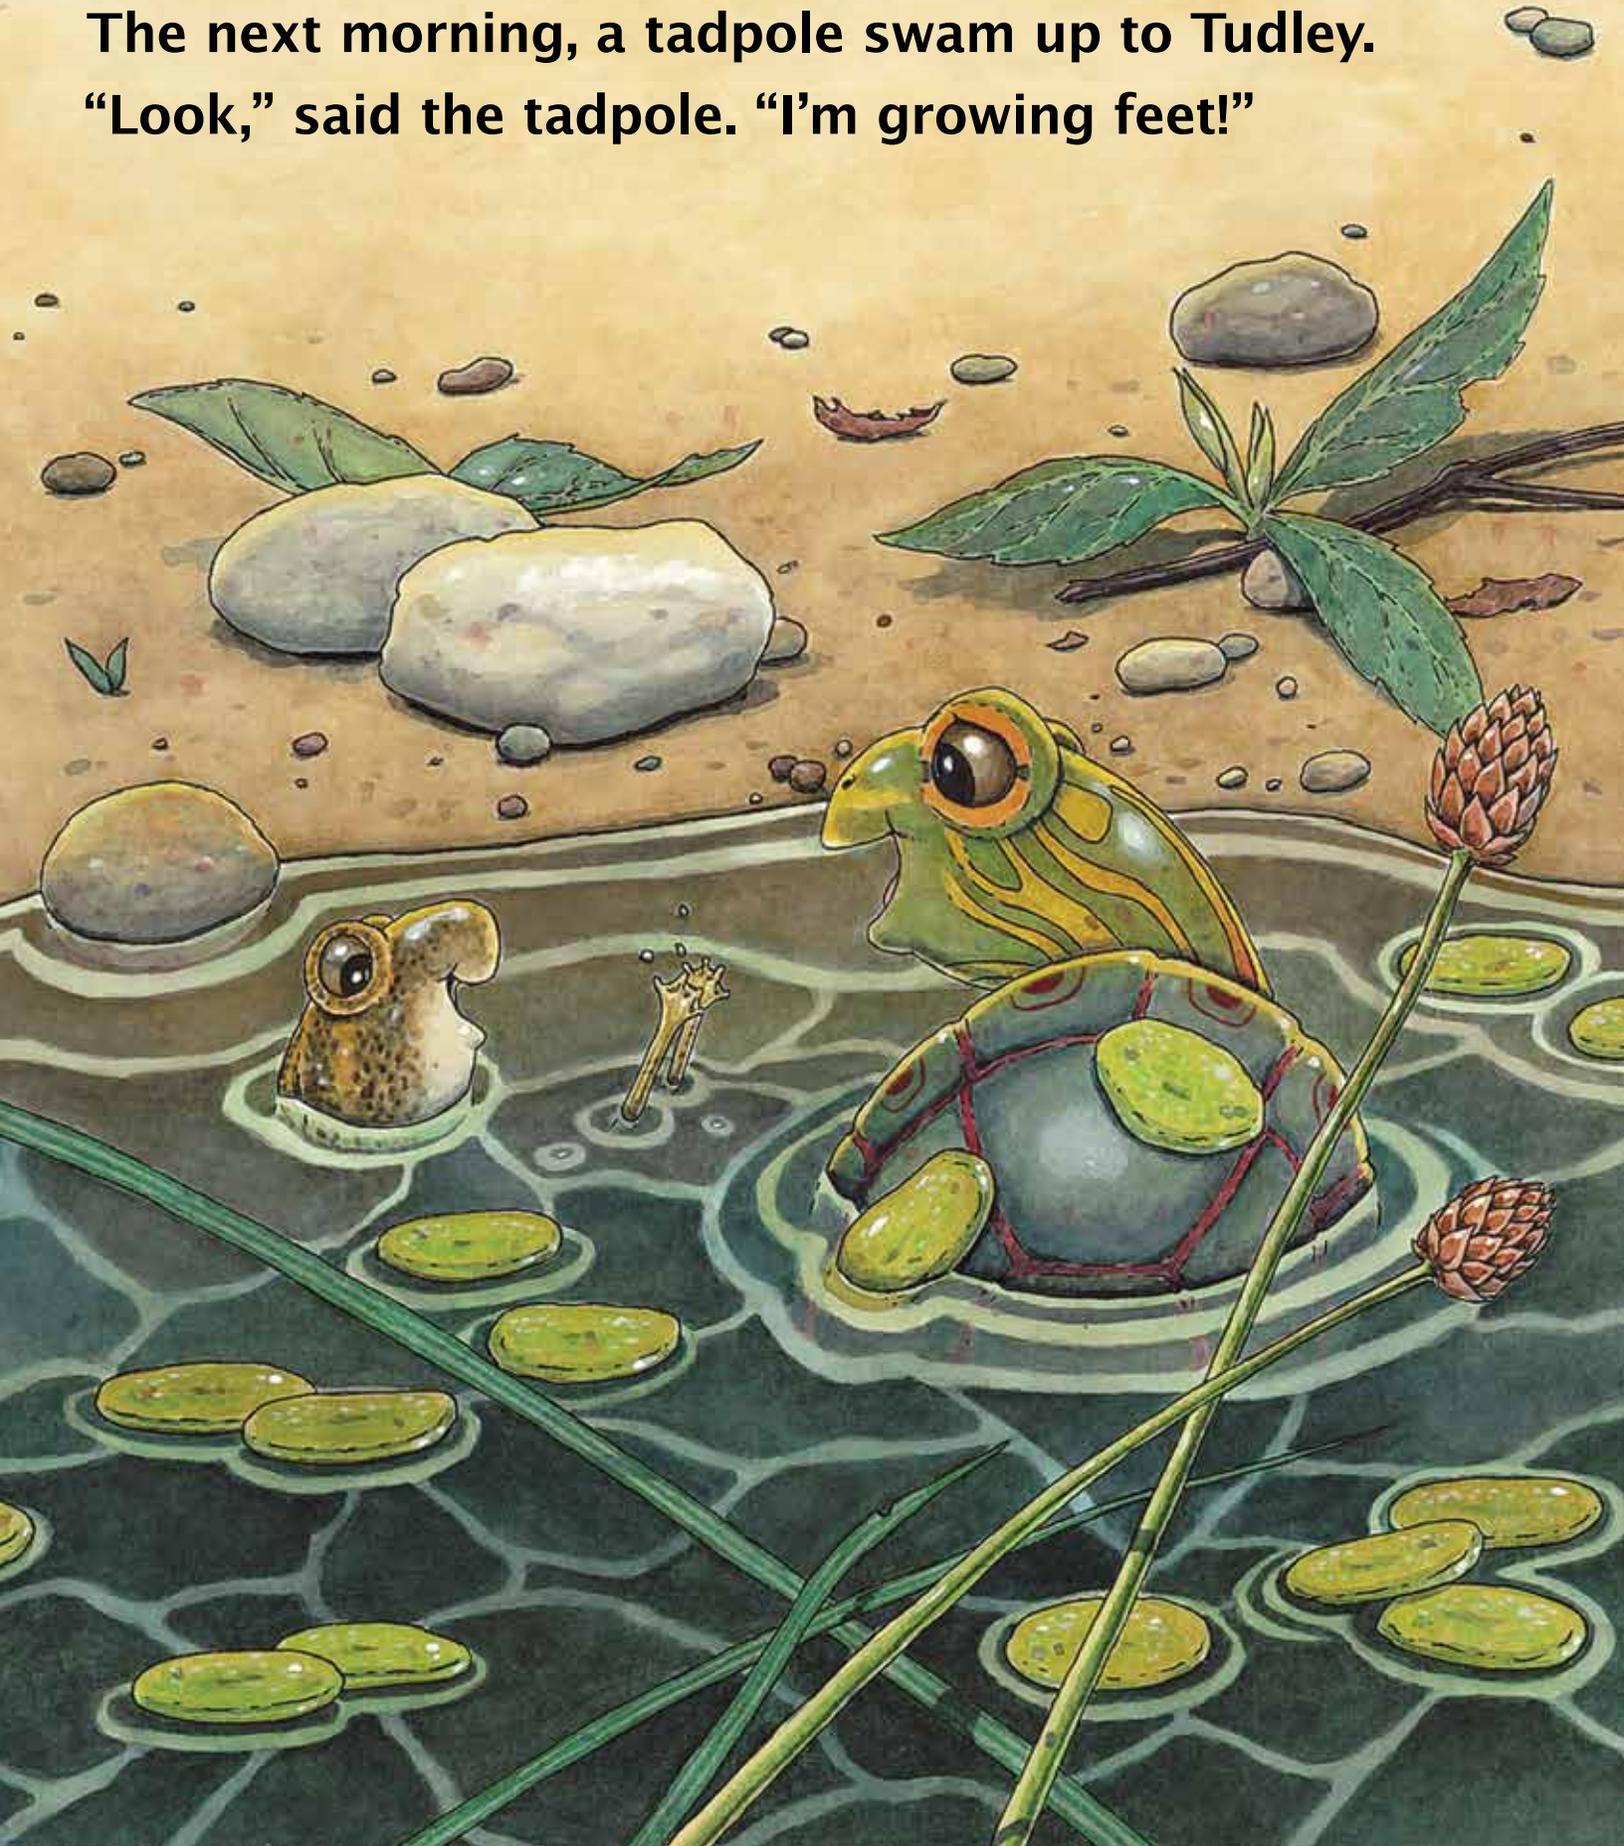

He looked at the other turtles who had gathered around him. Their mouths hung wide open.

“Did you know our tails don’t glow?” he asked. They all just nodded their heads.

The next morning, a tadpole swam up to Tudley.
“Look,” said the tadpole. “I’m growing feet!”

But then the tadpole looked sad. “I wish I could
show my mom,” he said.
“Where is she?” asked Tudley.
“Out hopping in the meadow,” said the tadpole.
“I will find her,” said Tudley.

For Creative Minds

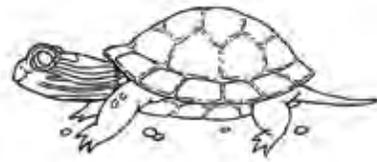

The For Creative Minds educational section may be photocopied or printed from our website by the owner of this book for educational, non-commercial uses. Cross-curricular teaching activities, interactive quizzes, and more are available online. Go to www.ArbordalePublishing.com and click on the book's cover to explore all the links.

Painted Turtles

Tudley is a painted turtle. All turtles are reptiles. Reptiles have scaly skin, breathe air, and usually lay eggs. When a reptile hatches, it looks like a miniature version of the adult who laid the egg.

Reptiles are “cold-blooded,” which means their bodies are warmed or chilled by the air or water around them. Painted turtles love to bask in the sun to get warm. Sometimes they lie with their arms and legs spread out (almost as if they are trying to fly). It takes them a while to warm up.

The shell offers a turtle protection, and a painted turtle can tuck its head, legs, and tail inside of it. Some turtles, like the box turtle, can completely close its shell. A sea turtle cannot pull in its head or flippers at all.

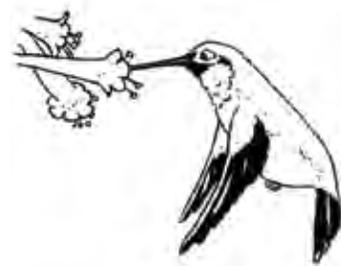

Ruby-throated Hummingbirds

There are 21 different kinds of hummingbirds in the United States. The bird in this story is a Ruby-throated hummingbird, the only hummingbird found in the northeastern United States. Males have shiny red feathers on their throats. They flash the bright colors to attract females. Their nests are often built near or over water and are made from spider webs, thistle, and dandelion down with the outside covered in lichen. Hummingbirds feed on nectar from flowers. They sip the sweet juice with a long tongue.

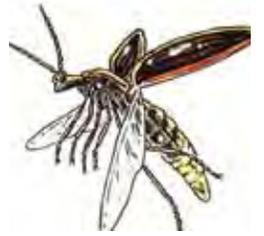

If you would like to see them up close, you can buy a hummingbird feeder. Hang the feeder near a window (so you can watch from inside). Fill the feeder with sugar water.

Here's how you make it: with the help of an adult mix 1 part sugar and 4 parts water. Boil the water and then mix in the sugar. Let it cool. This can be stored for up to two weeks in your refrigerator. Feeders should be cleaned about every 3 days during warm weather to prevent spoiling of the sugar water.

Fireflies

Fireflies are not flies, but beetles. They are also called “lightning bugs.” Both names call attention to the fact that they glow. Not only do most adults blink with a bright, yellow-green light, but the larvae and eggs can glow as well. Turn off the outdoor lights on a warm summer night and watch their show. You will notice some blinking in the air and some on the ground. The ones in the air are usually males who are trying to get the females to notice them. The females stay on the ground and flash their lights when they see a male they like. The male sees her signal and flies down to her.

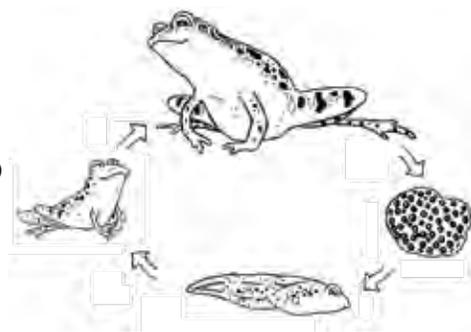

Leopard Frogs

Leopard frogs are amphibians. The word amphibian means “two lives.” One part of that animal's life is spent in the water. The other part is spent on land. When an animal changes form as it grows, it is called metamorphosis.

Frogs begin as eggs. The eggs hatch into tadpoles, or pollywogs. Tadpoles breathe under water through gills. They eat algae, dead plants, and animals. Back legs appear in time. Over the next few weeks the front legs appear. The tadpole grows larger and looks more and more like a frog. The tail slowly gets absorbed into the body, helping to feed the young amphibian while it is changing from a water-breathing animal to an air-breathing animal.

When the new froglet leaves the water, it still has a little stump of a tail left. It spends a few weeks around the water as it is growing up. If it is a leopard frog, it will then hop off to the nearest grassy meadow but will return to the water to mate and lay eggs.

True Katydid

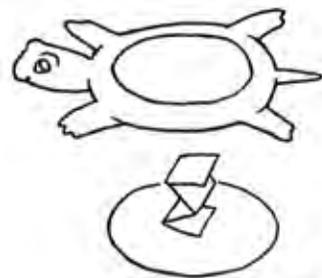

The katydid in this story is a True Katydid. These insects are related to grasshoppers but they live up in the trees. They look like the leaves they live in and feed upon. This helps to keep them hidden from hungry birds and other animals.

The males call all night long in the summer and fall. The females call, too, but not as much. The sound of a true Katydid's call is what gave all katydids their name. Some say it sounds like, "Katydid.....katy-did." You can make a scratching sound similar to a Katydid by scraping a fingernail over a comb.

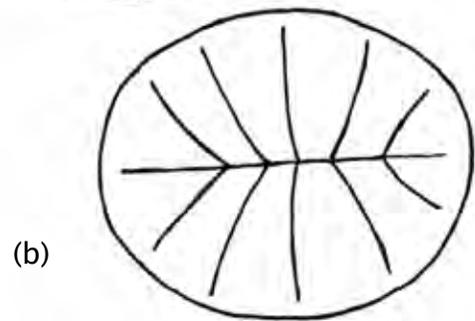

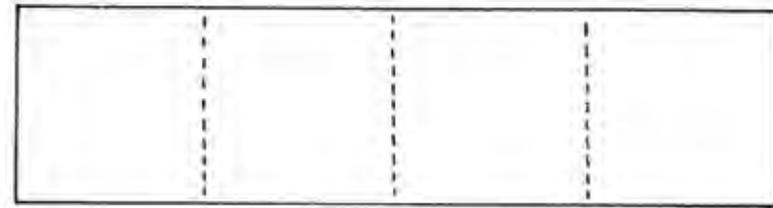

Make a hopping Tudley!

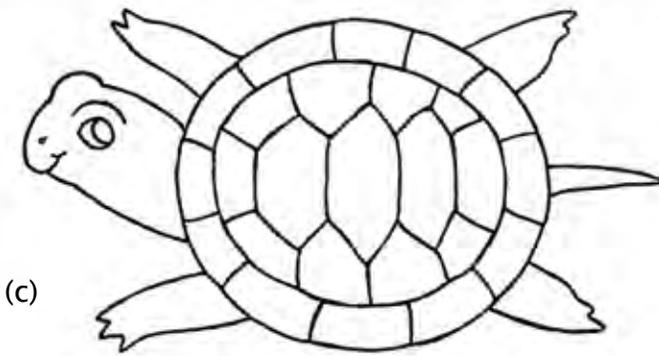

Copy, trace, or download (www.ArbordalePublishing.com) the three figures. Color in the top shell (**carapace**) and the bottom shell (**plastron**). Cut out the figures. Fold the strip of paper to make a spring. Tape or glue one end of the folded paper to the top of Tudley and one end to the bottom. Give his shell a tap and watch him hop!
